### **REMARKS**

In the specification, reference to the filing date of the parent application has been corrected from July 1, 2001 to July 10, 2001, as noted by the PTO in the filing receipt.

In addition, as requested by the examiner, a new Fig. 22 has been provided showing deflection of the beams as heretofore described in the specification. No new matter is added by this additional drawing. A description of the drawing has been added after paragraph 27.

Applicant acknowledges with appreciation the examiner's indication of allowable subject matter. The claims have been amended to address the examiner's objections as to form and the claims are now believed to be in condition for allowance.

Claim 1 has been amended to recite pivoting wheels on both beams and to specify the pivoting of the wheels outward and inward to deflect the beams outward and inward respectively as the vehicle moves backward. This is clearly supported by the specification. The examiner's rejection under 35 U.S.C. § 112 should be withdrawn as to claim 1 and all dependent claims. Applicant also respectfully traverses the rejection as to claim 15 and all claims originally dependent therefrom. Since original claim 15 specified a pivoting wheel on each beam, claim 15 was clearly supported by the specification, and should not have been rejected under 35 U.S.C. § 112. However, since the limitations of claim 15 have now been incorporated into claim 1, claim 15 has been canceled as duplicative. Claim 16 has been made dependant from claim 1.

Claim 20 has been canceled and the examiner's objection to that claim is, therefore, moot. Claim 21, formerly dependant on claim 20, has been made dependant from claim 19.

Finally, the examiner objected to claims 2 and 4 as being of improper dependent form. Applicant respectfully traverses this rejection. Claim 1 does not (and did not) require that the beams "bow", as claims 2 and 4 do. Although bowing is the preferred embodiment, the specification makes clear that one of skill in the art might

employ other ways to allow deflection. Paragraph 30 clearly states that "[a]lthough it is preferred to provide bending by the characteristics of the beam, the beams might also be hinged, for example, at their connection to the cab 18." Claims 2 and 4 further limit their parent claims by requiring that the beams bow rather than merely deflect, and are, therefore, properly structured as dependant claims. This objection to the form of claims 2 and 4 should be withdrawn.

Applicant believes that the concerns of the examiner have been fully addressed and that allowance of this case is proper. If any matters remain to be resolved, the undersigned attorney respectfully requests that the examiner call him.
